OmniiIntelOS S.A. is a fictional company. This document is generated for IntelAI demonstration and evaluation purposes.

1. Basis of preparation

Emissions are reported under the GHG Protocol Corporate Standard using an operational-control boundary. Scope 1 covers on-site generator fuel and the company vehicle fleet. Scope 2 is location-based, using a 0.62 tCO₂e/MWh grid factor for the Sahel interconnection. Scope 3 covers purchased goods and services, business travel and upstream cloud capacity.

Generator runtime is inside the boundary and is the single largest driver of the Scope 1 increase from 2024. Excluding it would make the numbers look better and mean less.

2. Emissions

3. Intensity

Total emissions	2,002 tCO ₂ e
Carbon intensity	156.8 tCO ₂ e per USD million
Energy consumed	1,748,212 kWh
Renewable share (exit)	44.2%
Water consumed	29,341 m ³
Waste diverted (exit)	65.1%

4. Social and governance

Headcount (exit)	219
Board diversity ratio	40.2%
Audit compliance score	99.6%
Privacy incidents	0
Employee turnover	11.1%
Training hours per employee	10.3

5. Methodology and emission factors

Standard	GHG Protocol Corporate Accounting and Reporting Standard
Consolidation approach	Operational control
Grid emission factor	0.62 tCO ₂ e/MWh (Sahel interconnection, location-based)
Generator fuel factor	2.68 kgCO ₂ e per litre diesel
Scope 3 categories included	1 (purchased goods), 6 (business travel), 8 (upstream cloud)
Scope 3 categories excluded	11 (use of sold products) - not yet measurable with confidence
Base year	2020
Assurance	Limited assurance, independent third party
Restatement policy	Restate if a boundary change moves base-year emissions by over 5%

Where a factor is uncertain, the more conservative (higher-emission) value is used. Categories that cannot yet be measured with confidence are named and excluded rather than estimated to a number that would look complete and mean nothing.

6. Targets and roadmap

Target	Baseline	Current	Target date
Renewable energy share >= 60%	12% (2020)	44.2%	2027
